Register of Hazardous Substances in use.

## Symbols used in this register.

### CHEMICAL HAZARD SYMBOLS

Chemical hazard symbols are found on some home products, as well as bottles of chemical reagents in the lab. Here, we take a look at European hazard symbols and the various dangers that they warn of.

		
ENVIRONMENTAL HAZARD	ACUTELY TOXIC	GAS UNDER PRESSURE
Indicates substances that are toxic to aquatic organisms, or may cause long lasting environmental effects. They should be disposed of responsibly.	Indicates life-threatening effects, in some cases even after limited exposure. Any form of ingestion and skin contact should be avoided.	Container contains pressurised gas. This may be cold when released, and explosive when heated. Containers should not be heated.
		
CORROSIVE	EXPLOSIVE	FLAMMABLE
May cause burns to skin and damage to eyes. May also corrode metals. Avoid skin & eye contact, and do not breathe vapours.	May explode as a consequence of fire, heat, shock or friction. Chemicals with this label should be kept away from potential ignition sources.	Flammable when exposed to heat, fire or sparks, or give off flammable gases when reacting with water. Ignition sources should be avoided.
		
MODERATE HAZARD	OXIDISING	HEALTH HAZARD
May irritate the skin, or exhibit minor toxicity. The chemical should be kept away from the skin and the eyes as a precaution.	Burns even in the absence of air, and can intensify fires in combustible materials. Should be kept away from ignition sources.	Short or long term exposure could cause serious long term health effects. Skin contact and ingestion of this chemical should be avoided.

## Folder 1

The COSHH Inventory is designed to keep track of all hazardous substances used or stored in the workplace. It supports compliance with the Control of Substances Hazardous to Health (COSHH) Regulations 2002 by recording key information such as substance names, hazard classifications, PPE requirements and available material safety data sheets (MSDS). The inventory ensures that risks are clearly identified, appropriate controls are in place and relevant safety information is available to all volunteers. It is an essential tool for managing chemical safety and reducing the likelihood of harm in the workplace.
